Coal prices to fall as demand stalls in US and Europe – IEA forecast

The unexpected spike in coal prices this year will likely be short lived, as global demand for the most-polluting fossil fuels stalls over the coming five years, the International Energy Agency (IEA) said in its latest five-year coal market forecast.

Coal's share of the world primary energy mix could fall to 27% in 2021, from 30% today, despite the fuel accounting for 45% of energy-related CO₂ emissions, the body predicted.
