FEATURE: LNG Outlook 2017 – Surplus or balance?

This year looks set to be an important year for LNG. Global production is forecast to reach around 292 mt, marking an increase of 34 mt from 2016 – an unparalleled year-on-year rise.

The lion's share of additional production will come from the ramp-up of liquefaction plants commissioned in the US and Australia in 2016. A fair amount of extra production also is expected from projects scheduled for start-up in 2017.
