Poland revamps Swinoujscie terminal to serve growing LNG bunkering market

Poland is to expand the capacity of Swinoujscie regasification terminal by 50% in anticipation of growing LNG bunkering activity in the Baltic region, the transmission system and facility operator (TSO) Gaz-System has confirmed.

Gaz-System said the project, which will boost capacity from 5 Bcm to 7.5 Bcm/year, involves increasing the layout of existing submerged combustion vaporisers (SCV) with additional units.
