Micro-scale liquefaction – Interview: Michael Walhof, sales director of distributed LNG, Dresser-Rand

Monetising stranded assets, expanding LNG as a transport fuel and bringing gas-fired electricity to remote towns and villages around the world are increasingly seen as gateways to maintaining profitability and securing a future role for the natural gas industry in the global energy mix. LNG Business Review spoke to Michael Walhof, sales director for distributed LNG at the Dresser-Rand business, part of Siemens Power & Gas, which is one of a handful of companies aiming to make micro-scale liquefaction deliver large, tangible benefits for upstream E&P activities, the environment and developing communities around the world.
