US shale gas plays becoming leaner and meaner – EIA

E&P firms operating at US shale gas plays continue to make strides in efficiency and are set to bring domestic production to an all-time high in the coming months, according to forecasts from the US Energy Information Administration.

Marcellus, the dominant gas play in the northeast, still leads the pack in terms of production, accounting for 25% of gas production nationwide, but other smaller plays are making significant advances in efficiency, the EIA said in its latest Drilling Productivity Report on Monday.
