The last couple of years have seen Georgia-headquartered Chart Industries, the global designer and manufacturer of cryogenic equipment used across the liquid gas supply chain, focus increasingly on small scale LNG solutions, ranging from LNG to power and micro-liquefaction to LNG as fuel in road and marine transport. According to Jillian Evanko, the company's CEO and president, and Scott Nason, product manager for Chart's rail products group, this strategic tilt forms part of a natural evolution, not only for Chart but for the LNG industry, too.
