Petrobras approves CompactGTL gas-to-liquids technology following year-long trial

A gas-to-liquids (GTL) technology that could provide a welcome option for the monetisation of stranded oil fields that contain associated gas has been given the thumbs-up by Brazil's state-owned oil and gas company Petrobras. The technology's developer, UK-based CompactGTL, has just announced that a year-long trial in Brazil has satisfied Petrobras engineers that the process works as intended.
