Oil prices recorded a strong drop on Wednesday after the International Energy Agency confirmed that its member nations have agreed to release 120 million barrels of oil from strategic reserves.

The front-month Brent and WTI contracts settled over 5% lower on Wednesday, with the former closing at USD 101.07/barrel and the US crude benchmark closing at USD 96.23/barrel – the first time WTI has closed below the USD 100/barrel mark since 16 March.

The fall was pinned on the IEA confirming that its member countries will release 120 million barrels of oil from reserves, with half the quota to come from the US.

Rising Covid-19 cases, namely in China, have also weighed on oil prices in recent days.

Natural gas prices also fell on Wednesday, with US gas benchmark Henry Hub recording a minor drop to close at USD 6.03/MMBtu.

Across the pond, European gas prices continued to fall amid robust supply. Russian flows to Europe averaged 261 MMcm/d on Wednesday, up from 258 MMcm/d on Tuesday, according to EnergyScan.

Asian LNG marker JKM recorded a minor loss, closing at USD 33.44/MMBtu.
