Natural gas prices on both sides of the Atlantic fell on Tuesday, with US benchmark Henry Hub falling for the first time in six days, and European hubs TTF and NBP settling at a two-month low.

The front-month Henry Hub contract – which touched an intraday high of over USD 8/MMBtu on Tuesday – settled 8.2% lower on Wednesday at USD 7.18/MMBtu. The drop was pinned on a technical correction, with the marker's recent rally pinned on flat production coupled with strong domestic and export demand.

Across the pond, UK marker fell to its lowest level since 21 February, closing 2.3% lower day-on-day at the equivalent of USD 22.55/MMBtu. Dutch marker TTF dipped below the equivalent of USD 30/MMBtu for the first time since 25 February. Gas prices in Europe have fallen in recent days amid mild weather and robust LNG and pipeline gas imports.

As for oil, Brent and WTI closed over 5% lower on Tuesday, with the fall pinned on the International Monetary Fund (IMF) making a downward revision to its global economic forecast. The IMF now expects global economic growth of gross domestic product this year of 3.6%, down 0.8% percentage points on its January forecast. Higher inflation and Russia's invasion of Ukraine were the main reasons for the downward revision, with lower GDP growth stoking concerns over crude demand.

Brent settled at USD 107.25/barrel, with WTI closing at USD 102.05/barrel.
