ADNOC's evolution: Emirati major revs up for leader role in global energy transition

In recent years, the Abu Dhabi National Oil Company (ADNOC) has made bold moves to transition from its legacy as a top Middle Eastern oil producer to championing gas and LNG growth, while investing heavily in low-carbon opportunities, such as carbon capture and storage (CCS) and hydrogen.

Although the appointment of its CEO as president of COP28 in Dubai was controversial, the event was seen as a success by the legacy energy sector and hailed as “pragmatic” – a word that could be applied to ADNOC's approach as it vies to position itself as a leading player within the global energy transition.
