‘Only 1% of Brazil’s emissions come from oil and gas production’: Energy Research Office (EPE), Brazil

Heloísa Borges Esteves, director for oil, natural gas and biofuel studies at Brazil's Energy Research Office (EPE), provides an insider's view on the strengthening of the country's energy institutions and the role of oil and gas in its energy transition. In this exclusive feature interview with Gas Matters, she explains why limiting Brazil's hydrocarbons output will not help it meet emissions pledges, outlines the case for biomethane, and reveals that Brazil's natural gas demand is expected to increase over the next 10 years.
